

VOLUNTEER FOR THE TEXAS CARES SURVEY!

This study is trying to understand if a person's COVID-19 antibody response changes based on whether or not they show symptoms, and how antibodies might be helping to control the spread of COVID-19 at this time. Visit sph.uth.edu/landing/TexasCARES for more information.

Who can participate?

We want to hear from all Texans! Individuals who have tested positive, negative, or have never been tested for COVID-19 at all are welcome to participate. School-aged children (5-17 years), education professionals, patients at community clinics, and employees at health clinics, public transit, banks and grocery or retail stores are especially encouraged to join the study.
